5233656

For: Bosch PMGR

Used On: Chrysler, Dodge, Dodge
Truck, Plymouth
Lester: 16962

Note: The 4-818 drive is similar to the
4-737 drive, the difference being the
distance between the center of the
shift lever buttons to the end of pin-
ion. The 4-818 distance is 54mm and
the 4-737 distance is 49mm. These dri-
ves will not interchange with each other

How to Determine Rotation on Starter Drives & Shafts

Starter Drive Rotation is determined by viewing the pinion end of the drive. Where the chamfer is on the left of each tooth, the drive rotation clockwise, or right hand. Conversely, where the chamfer is on the right, the drive rotation is counter clockwise, or left hand.

Left Hand
Drive

Starter armature shaft rotation (right or left) can be determined by looking at the shaft with the drive end to your right and the commutator end to your left. If the splines turn down, from left to right (see figure number 3) it is a right hand drive. If the splines turn up, from left to right (see figure 4) it is a left hand drive.
