

Gasoline Disposal and cost reduction

http://vrr.dyndns.biz_rvandervort@stny.rr.com

All Gas has water in it, but how much? Rotten, Spoiled and water contaminated gasoline have a disposal cost and laws and all gasoline is hazardous. Hazardous wastes have rules to protect us. Broome and Tioga counties provide cost free methods and procedures for their residents to properly dispose of hazardous wastes as a service to residents. Businesses must however pay fees monthly, and per visit and per quantity. As such we take the first course action to give you back any bad gas for your disposal and provide the information how this can be done. We also offer other options which add to your bill from us. The options are outlined below. The Information for your disposal follow next.

Tioga County Recycling Department (800)-927-2323. As of 3/12/2017 Tioga's site is <https://www.tiogacountyny.com/programs-agencies/recycling/>

And states: "**Gasoline**

<https://www.tiogacountyny.com/programs-agencies/recycling/> Take to one of Tioga County Solid Waste's Household Hazardous Waste Days, held three times per month from April through November."

Essentially both Tioga and Broome counties are the same except the open month's limitation on Tioga County. Broome County handles it for both counties.

Broome County's Site and details for both:

<http://www.gobroomecounty.com/solidwaste/hazwaste>

To reduce the cost to our customers, the above information is offered. Below are how we approach this hazard:

- 1) **Lowest cost option:** Your bad gas is removed and handed to you in a labeled container for proper handling. When this option can be performed, it is the default when simple treatment will not work. Tank sizes and other factors may make other options necessary.
- 2) **Filtration:** We have designed and built a filtration system that will separate the water and return the gas to your tank. It is time consuming and has costs. We charge for the cost and the minimum charge is \$30.00.
- 3) When the above options are not available, the cost increases as we undergo various safe methods.
