35SI™ Upgrade Program

Many trucks on the road today are equipped with Delco Remy 33SI and 34SI premium brushless alternators. The truck OEM's and truck owners know that these premium products offer exceptional cost per mile benefits. To keep these trucks operating with the best charging system, it will be important to maintain this spec when it comes time for replacement.

Now Remy has introduced the new Delco Remy 35SI Premium Brushless Alternator with heat resistant design to operate in under-hood temperatures of up to 105°C/221°F. With the 35SI Upgrade Program, you can convert any truck with a 33SI or 34SI to the new high temperature 35SI model and receive full core credit for each 33SI and 34SI core returned. (See back for part number information) Effective 1/1/05, 33SI, 34SI, 35SI and 35SI HPs will become one core group based on mounting style.

Here's how it works using Genuine Delco Remy remanufactured units:

Remote Sense Technology

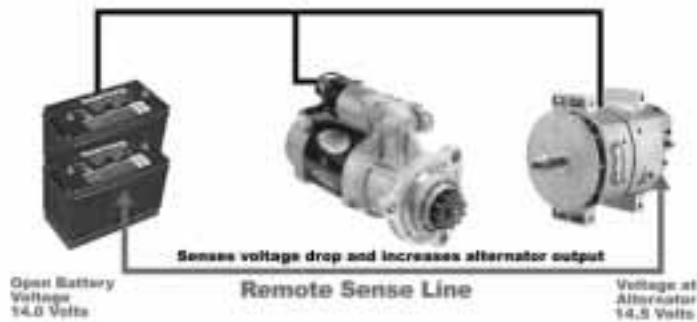

Some 35SI alternators feature Remote Sense Technology that senses the voltage level at the batteries and adjusts alternator output accordingly. A direct connection from the alternator's fourth terminal to the batteries provides highly accurate voltage readings and optimizes battery state of charge.

Is Your Vehicle in Spec?

Starting performance can be adversely affected by electrical system voltage drops.

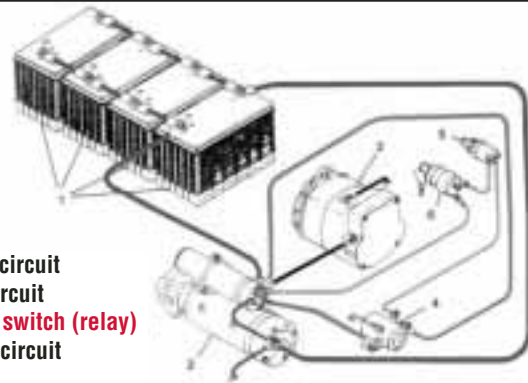

The Maintenance Council (TMC) specifies cranking circuit voltage drop of not more than 1/2 volt for a 12-volt system and one volt for a 24-volt system. TMC also states the control circuit must have a maximum drop at 80 amps of one volt for a 12-volt system; maximum drop at 40 amps is two volts on a 24-volt system.

Common Causes of Cranking Circuit Voltage Drop

- Corrosion of the terminals or cables
- Loose terminal or ground connections
- Undersized cables
- Battery cables that do not originate in close proximity to the starter

Remy Inc. Integral Magnetic Switch

Most OEMs have included magnetic “relay” switches in the design of the vehicle to transmit control circuit current. Many of these relays cannot successfully handle the amperage requirements of the starting motor. This may adversely affect starting performance.

Remy’s solution is the optional, OEM-approved heavy-duty Integral Magnetic Switch (IMS) attached directly to each Class 7 and 8 MxT starter, ensuring a far more robust and reliable circuit for starting the motor. The Delco Remy IMS Solution reduces amperage draw on the control circuit from 300 Amps to 4 Amps, ensuring optimal operation and reliability.

IMS Switch

The Delco Remy **42MT** straight drive starter, with mechanical soft start, creates lower demand on the control circuit at start-up because of lower current draw on the solenoid.

To test whether your vehicle is in spec, use the Remy® Intelli-Check2™ hand-held diagnostic tool.

Testing with heavy-duty straight drive and MxT starters shows that for every one volt of drop in a system, the cold-crank engine RPM is reduced by 28 RPM.
